

ABSTRACT OF THE DISCLOSURE

The invention relates to a shifting device (1), for the transmission of shifting commands to a vehicle gearbox, comprising a housing (2) and/or a frame, a selector lever (4), transmitting shift commands to the gearbox, a knob (3), providing a grip for the hand of the vehicle driver and a switch (5a). The shifting device (1) is provided for assembly in a motor vehicle and, preferably after fitting of the shifting device (1), a shifting gate is placed over the selector lever (4). The invention is characterized in that an adapter (7) for the knob (3) with an integrated switch (5a) is provided, fitted to the selector lever (4) and forms a connection point between the selector lever (4) and the knob (3).
